

Air Quality Services

Some of the most stringent and strictly enforced legislation governed by the U.S. Environmental Protection Agency (EPA) is under the Clean Air Act (CAA) and subsequent amendments. The CAA and its amendments are designed to protect human health and the environment by addressing important air quality issues such as ozone depletion, urban smog, and toxic air emissions. Ensuring cost-effective compliance with this legislation and state and local-level regulations is critical to successful, long-term facility operations. Benefits include enhancement of existing company programs, mitigation of operational delays, developing and maintaining advantageous working relationships with state and federal agencies, and minimization of environmental liabilities.

Our services include:

- Planning and preparedness
 - Regulation review and interpretation
 - Training program development and implementation
 - Applicability analysis, including:
 - Hazardous Air Pollutants (HAPs)
 - National Emissions Standards for HAPs (NESHAPs)
 - Maximum Available Control Technology (MACT)
 - New Source Pollutant Standards (NSPS)
 - Best Available Control Technology (BACT)
- Control technology assessments
 - Permitting:
 - New Source Review (NSR)
 - Prevention of Significant Deterioration (PSD)
 - Title V operating permits
 - Minor and major source
 - Construction
 - Recordkeeping and reporting
 - Toxic release inventories
 - Emissions inventories
 - Compliance certifications
 - Greenhouse gas (GHG) management:
 - Management system development and integration
 - Performance benchmarking and reporting
 - Assurance and verification
 - Compliance audits
