

Engineering and Design

Cameron-Cole provides results-oriented engineering and design solutions for our clients' environmental problems in specific jurisdictions where we are licensed and have proper authority. Our multidisciplinary staff includes chemical, civil, geotechnical, and environmental engineers with expertise in hydrocarbon recovery; groundwater treatment; waste fixation/stabilization and thermal treatment processes; in situ chemical oxidation, soil vapor extraction and bioremediation systems; and engineered liner and cover systems.

Our services include –

- Technology review and evaluation
- Conceptual engineering design and remedial action plan development
- Technical feasibility and economic evaluation
- Detailed design and bid specification preparation
- Value engineering reviews
- Permit preparation and consultation
- Contractor prequalification and construction bid management
- Construction management, inspection and completion certification
- System startup, operation, maintenance and monitoring
