

Site Closure

When dealing with environmental requirements placed on industry, today's industrial managers face increasingly complex technical, regulatory and business issues. Cameron-Cole's role is to provide site closure services to aid our clients through these complexities and to seek opportunities to reduce our clients' workload. To this end, Cameron-Cole offers advanced data management, streamlined compliance reporting, expedited site/unit closures, and single-source consulting and waste management services, including:

- Using advanced techniques that support appropriate/realistic cleanup levels
- Providing pragmatic site assessment,

remediation, and expedited regulatory closure

- Using statistical techniques to minimize the volume of soil requiring remediation
- Focusing groundwater monitoring requirements and retiring remediation systems
- Managing environmental data and compliance reporting

Cameron-Cole's extensive track record of achieving regulatory closure, while producing significant savings, has made us a valued partner in our clients' environmental operations.
