

# Waste Management

Cameron-Cole provides key technical support in the siting, permitting, design, construction, and operation of landfill facilities, incinerators, and waste storage and transfer facilities across North America.

Our services include –

- Waste facility site selection and evaluation
- Permitting
- Regulatory compliance, including RCRA, TSCA, CWA and CAA requirements
- Remedial design and implementation
- Project construction management
- Pollution prevention management and recycling/reuse
- Solid and hazardous waste management
- Third party environmental compliance audits and due diligence investigations
- Landfill design
- Litigation support

In regard to permitting, we understand that a facility permit must do more than meet standards; it must be compatible with the business objectives of the permit-holder. We focus on defining those objectives with our clients, and incorporating them into their permit.

## Cameron-Cole

creating sustainable success
