

Wastewater Management

Cameron-Cole's experienced engineers have successfully designed, installed, and optimized numerous wastewater treatment systems for a variety of industrial applications. Cameron-Cole is experienced in planning, permit negotiations, technology screening, treatability testing, engineering design and construction, startup, operator training, and operations and management.

Our engineers have worked with pretreatment coordinators and other POTW personnel to negotiate discharge limits, and are also trained in preparing and negotiating National Pollutant Discharge Elimination System (NPDES) permitting with various regulatory agencies.

Our services include –

- Wastewater characterization
- Bench/pilot scale treatability testing
- Technology screening
- Focused feasibility studies

- Treatment/process plant design
- Startup assistance
- Operational troubleshooting
- Operating manuals
- Pretreatment discharge compliance
- NPDES permitting
- Permit negotiations
- Source control/waste minimization
- Construction management
- Environmental data management
- Sludge management
- Litigation support

Cameron-Cole performs compliance sampling and ensures that the proper analytical techniques are utilized within the scope of the permit, and that all reporting is accurate and presented in clear and concise formats to the appropriate regulatory agencies.
